Security Services Training Materials

Why Us?

Why Use Our Security Services?

Mobile & Fast Service – Our proprietary remote security testing process provides security testing anywhere in the nation (& world) within days of an engagement. This not only makes our service more efficient and affordable, but also less intrusive to our clients day-to-day business. **Mobile, Noninvasive & Affordable**

Affordable Rates – Because we are not onsite and due to our efficient testing process, our security services are extremely competitive and often less expensive than normal market rates. **Premium Value at Competitive Price**

High Quality Testing – Our testing teams have 7 years minimum applicable experience with a strong history of providing premium testing and reliable results. **Superior Testing with Reliable Results**

Premium Results Portal – Our proprietary client facing dashboard provides all current and historical test results in an understandable and actionable format. Whether you are the remediation team or the CEO, our portal provides results in a graphical and digestible layout for management and executives alike. **See Client Dashboard for more**

Plug & Play or Plug & Extend – Our security services can be plugged into your company as your primary testers or simply to extend your security testing bandwidth. Regardless, we make it easier for our clients to manage the larger picture of testing results and remediation recommendations which are critical for cyber security success. **Testing Solutions for your Environment**

What You Get

- Fast, flexible and remote service deployment

- Qualified and talented pool of security testers

- Efficient, affordable & high quality testing

- Hardware and software required to conduct engagements

- Project management of each engagement

- Detailed results and remediation reporting in client friendly easy-to-import format

- Customer dashboard to review test activities, results & remediation

- Tailored reporting and output of testing data as required per customer

Client Dashboard
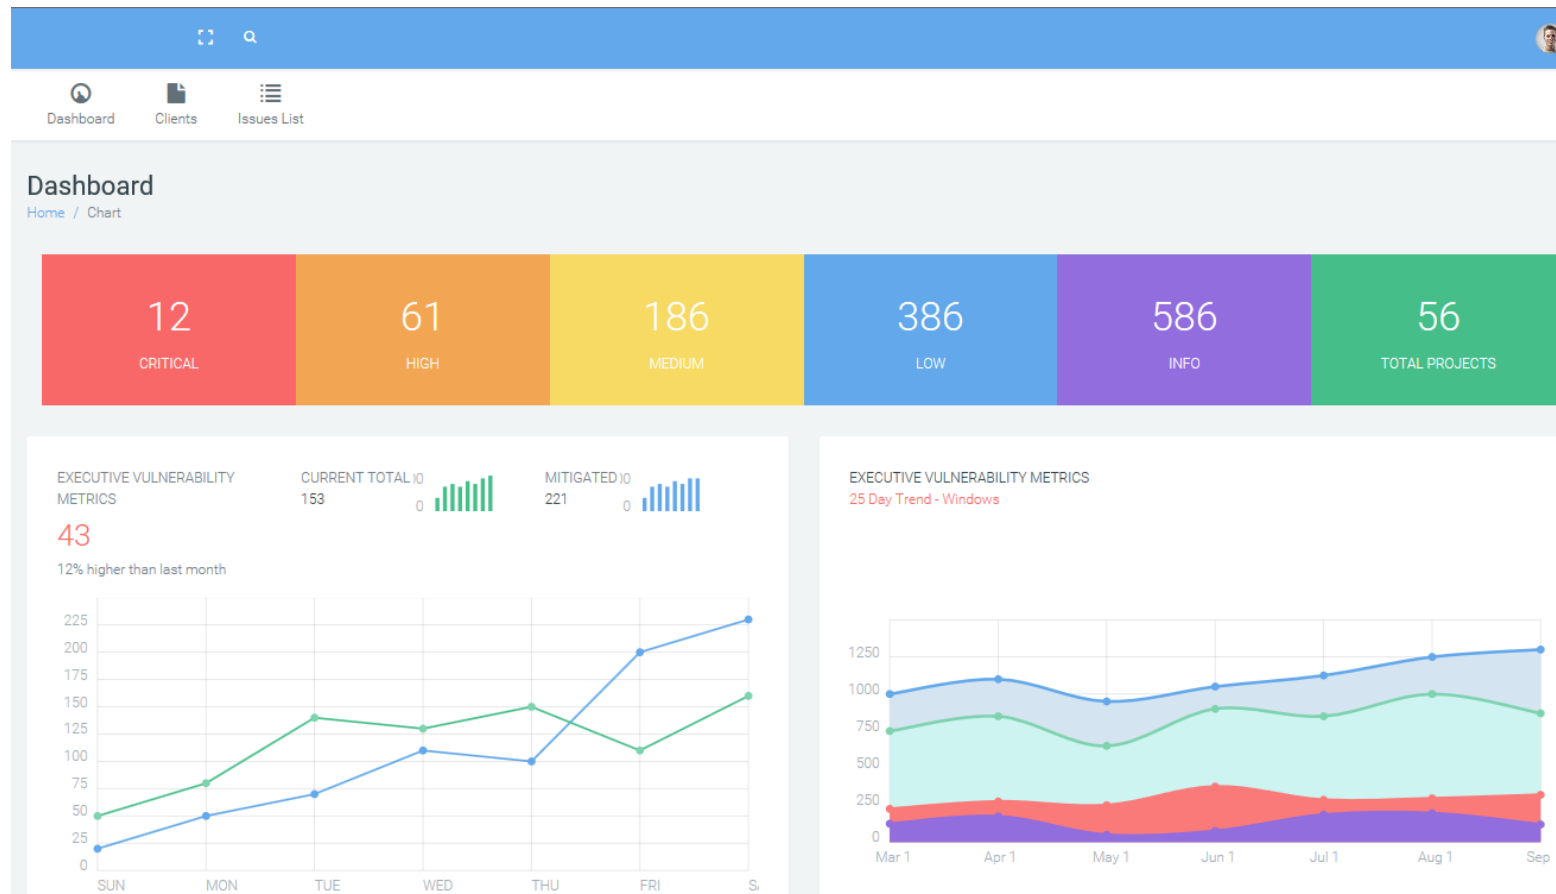

This dashboard allows clients to see all test results in a understandable and manageable format.

Here IT staff can successfully navigate remediation while management and executives can see the "big picture" to manage overall risk.

Our Testing Team

Our security team has a combined 40 years of executive IT experience with a team of over 150 highly skilled and seasoned security professionals. All security assessment and testing employees have a minimum of 7 years of experience within the information security industry. Each has a Bachelor's degree in Computer Science or Software Development or comparable work experience and hold certifications such as EC-Council Certified Ethical Hacker (CEH) and Offensive Security Certified Professional (OSCP). Our employees are encouraged to be active members of their local information security community and present at various conferences and events on security related topics. Additionally, our team members are encouraged to participate in vulnerability research contests and bug bounty programs, to further develop their skills and broaden their experiences.

We provide advanced training for all its testers, and such training is an integral component of the employee review process. We host internal training sessions where team members share knowledge and techniques, and also sponsor "hackathons" where testers get the opportunity to work exclusively on solving a problem to make them more effective, whether building a new tool, integrating new methods into the process or extending the platform to improve the effectiveness of our services. These events often generate ideas that we bring into production as part of the formal process to ensure our processes and tools are driven by the quality of the testing they enable.
